

DRYSUITS

DUAL FUNCTION DRYSUIT / FOUL WEATHER GEAR!

Dual Function Drysuit / Foul Weather Gear

Featuring our revolutionary Captive Zip design, the Soul Series of drysuits blurs the line between foul weather gear and a traditional drysuit; combining the water integrity of a drysuit with the comfort of traditional foul weather pant and jacket combinations.

When worn in 'full dry' mode each of the Soul Series drysuits are 100% dry. In fair weather conditions or when relaxing between harsh weather exposure the suit is quickly converted to 'standby mode' by doffing the neck seal and reclosing the over-jacket. When in standby mode and with the over-jacket zipped closed, the suit provides ventilation and protection on par with or superior to other leading foul weather gear ensembles. Converting from standby mode to full dry mode can easily be accomplished while wearing your PFD.

INDUSTRY PROVEN

For **20 years** our in-house design team has built and designed commercial marine, military and survival drysuits for some of the world's leading brands. This isn't our first commercial drysuit. It's simply the first time we've stepped out of the shadows.

Our newest suit The Boss combines the fit and style of our sport suits with the form and function your work environment demands.

The Boss. Take control.

CONSTRUCTION YOU CAN TRUST

Ocean Rodeo's waterproof breathable three layer material "VENTOR" is designed specifically for drysuits, featuring a salt water resistant non-porous, hydrophilic polyurethane (PU) breathable membrane. This fabric has been in the Ocean Rodeo lineup since 2008, with many thousands of suits in use.

(OUTSIDE *A) ABRASION LAYER:

200 Denier Nylon/Taslan with DWR finish. The tough outer fabric is coated with DWR to repel water while allowing sweat release from within your suit.

(MIDDLE *B) NON-POROUS, HYDROPHILIC POLYURETHANE BREATHABLE MEMBRANE (PU):

VENTOR works well in both fresh and salt water environments and does not break down with extended salt water use. This is the part of the suit that keeps you dry. It allows sweat vapor out while not letting any water in.

(INSIDE *C) TRICOT: NYLON 18 DENIER TRICOT SCRIM:

The inside mesh layer helps protect the PU breathable film. This is what you are looking at inside the suit.

WATERPROOFNESS

10,000MM H₂O OR HIGHER *1

MOISTURE PERMEABILITY

5,000-7,000 G/M²/24HRS. A1 *2

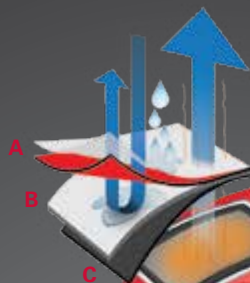

WATER REPELLENCY

80 POINTS OR HIGHER (AFTER 20 WASH CYCLES) *3

*1 JIS L1092B, ISO 811

*2 A1 UPRIGHT CUP METHOD (JIS L1099 A1, ISO 2428, ASTM E96)

*3 JIS L1092B, ISO 4920
